

e-go motion

WITH E-GOMOTION INDUSTRY AND ACADEMY REACH OUT TO HIGH SCHOOL STUDENTS

e-gomotion is about making the moves towards electrified transportation. Vehicle electrification is crucial for lowering road transport emissions and its role will continue to grow as we shift to an electric road transport paradigm.

To enable this shift we need young and skilled people to lead the way.

With e-gomotion five leading European universities and the largest car manufacturers in Europe will guide you through the world and opportunities of electro mobility.

CHALLENGE

Check out the e-gomotion Challenge! High school students from five European countries have joined e-gomotion regional electrification concept competitions. In November in Barcelona e-gomotion will award the best concept.
